Contents

Chapter 1

Drills: Part of Every Healthy Intellectual Diet

The goal of this book is to organize my R drills into reasonable chunks, the better to understand my strengths and weaknesses, and to plan new forays into data science.

Chapter 2

bookdown Tips for This Document

2.1 Basic conventions

- the `_bookdown.yml` file contains a snippet that is important to inserting the word "Chapter" before the chapter number in each of the Rmd files.
- packages are indicated in bold, like **dplyr**
- inline code and filenames are indicated in typewriter face using backticks, like `_bookdown.yml`
- `_output.yml` is modified from that used by Xie in his `bookdown-demo` (**?**); it evokes `style.css`, `toc.css`, `preamble.tex`, which are also borrowed from Xie.
- chapters are set in order by using adding 01, 02, 03, ... before the name of their Rmd, like `01chpter.Rmd`. Note that they can have short descriptive phrases, since the actual chapter titles are determined by the hashtag. `index.Rmd` always comes first in the book build, and contains the `yml` front matter.

2.2 Referencing other parts of the document

This is a good place to practice referencing figures. Say that I want to refer the reader back to my first starwars figure. See Figure **??**.

I can reference other pages in a similar fashion. See Chapter **??**. Note that this works by referencing a {#label} placed in the chapter title.

See Chapter **??**
